

INF2009F - 2023

Constructing a Domain Class Diagram

Exercise 7 - (20 Marks)

Student Name: Alex Cristaudo

Student Number: CRSALE010

IMPORTANT NOTE:

- Copied or Plagiarised answers will get 0 and student will be referred to Elsje Scott or Ayanda Pekane for further actions
- Please upload your completed exercise on Vula by the 11th April 2023 at 9am (9:00)

Please revisit the Khwela Womxn Case Study to remind you of the background and the current processes involved. During a Joint application design (JAD) session with the management of Khwela Womxn, they communicated business rules and information about the processes and the requirements and listed them. Use the noun and/or brainstorming techniques to identify the ‘things’ in the problem domain that you need to store data about.

Exercise Task --- Domain Class Diagram

Use the **above mentioned techniques** to identify the domain classes in the problem domain of the Khwela Womxn Case Study where the goal is to equip womxn with opportunities for experiential learning and increased access to safe peer-mentorship spaces, so that they can transform their mindsets and uplift themselves personally and professionally. Draw a **Domain Class Diagram (14 marks)** for the proposed system that will automate aspects of Moderator Training, Sister‘hood’ Circle Allocation and related logistics like the further distribution of Circle content via the WhatsApp bot (In this case you do not have to include the attributes of the different classes, but please **Identify and list the main attributes for these classes, separately (6marks).**). Ensure that all classes are labelled. Identify the associations between different classes (where they exist), label them with the direction in which to read the label and also include the multiplicities.
