

INF2009F - 2023

Refining a Domain Class Diagram to construct an Analysis Class Diagram

Exercise 8 - (15 Marks)

Student Name: Alex Cristaudo

Student Number: CRSALE010

IMPORTANT NOTE:

- Copied or Plagiarised answers will get 0 and student will be referred to Elsje Scott or Ayanda Pekane for further actions
- Please upload your completed exercise on Vula by the 17th April 2023 at 9am (9:00)

Please revisit the Khwela Womxn Case Study to remind you of the background and the current processes involved. During a Joint application design (JAD) session with the management of Khwela Womxn, they communicated business rules and information about the processes and the requirements and listed them. Use the noun and/or brainstorming techniques to identify/revisit and refine the 'things' in the problem domain that you need to store data about.

Exercise Task --- Analysis Class Diagram

Use the **Domain Class Diagram** for the **Khwela Womxn Circle and Content Management** system provided in Exercise 7. In class diagrams there are three types of relationships between classes and objects: Association relationships; Generalisation/Specialisation Relationships and whole-part relationships.

1. Refine the Domain Class Diagram by resolving each one of the three types of relationships. Indicate occurrences of **inheritance**, **composition** and **aggregation** in the diagram. You have to add classes if necessary to accomplish this. (5)
2. Add association classes, where necessary to resolve the many to many relationships. (3)
3. Provide a succinct narrative to walk through the diagram and describe the interactions of the objects of these classes (7)
