Answers

1. (a) False
- (b) False
- (c) False
- (d) False

2.

$$\begin{aligned}n \cdot 3 &= n \cdot s(2) \\&= n \cdot 2 + n \\&= n \cdot s(1) + n \\&= (n \cdot 1 + n) + n \\&= (n + n) + n\end{aligned}$$

This means $n \cdot 3 = (n + n) + n$

$$\begin{aligned}s(2) &= 3 \\&\text{(M2) with } m = 2 \\s(1) &= 2 \\&\text{(M2) with } m = 1 \\&\text{We are given that } n \cdot 1 = n\end{aligned}$$

3.

$$\begin{aligned}2 \cdot 1 &= 2 \cdot s(0) \\&= 2 \cdot 0 + 2 \\&= 0 + 2 \\&= 0 + s(1) \\&= s(0 + 1) \\&= s(0 + s(0)) \\&= s(s(0 + 0)) \\&= s(s(0)) \\&= s(1) \\&= 2\end{aligned}$$

This means that $2 \cdot 1 = 2$

$$\begin{aligned}s(0) &= 1 \\&\text{(M2) with } n = 2, m = 0 \\2 \cdot 0 &= 0 \text{ by (M1)} \\s(1) &= 2 \\&\text{(A2) with } n = 0, m = 1 \\s(0) &= 1 \\&\text{(A2) with } m = 0, n = 0 \\0 + 0 &= 0 \text{ by (A1)} \\s(0) &= 1 \\s(1) &= 2\end{aligned}$$
